M.S Statistics (concentration in Biostatistics)
Northeastern University

EDUCATION

Northeastern University, Boston, MA | *M.S. Statistics (Biostatistics)* **May 2027 (Expected)**
- Cumulative GPA: 4.0 (Summer 2026)
- Relevant Coursework: Real Analysis 1†, Causal Inference 2†, Advanced Method in Biostatistics†, Causal Inference 1, Generalized Linear Model, Foundation of Statistics, Stochastic Process, Statistical Learning

Boston University, Boston, MA | *M.S. Applied Data Analytics* **May 2022**
- Cumulative GPA: 3.79
- Relevant Coursework: Machine Learning, Deep Learning, Big Data Management

Boston University, Boston, MA | *B.A. Computer Science* **May 2020**
- Computer Science Major and Economics Minors
- Relevant Coursework: Linear Algebra, Multi-variable Calculus, Statistics in Computer Science, Econometrics

[†] Fall 2026 Semester at Northeastern University

PUBLICATIONS

[1] Zhang Zongshun, **Ethan Timoteo Go** "Grand Challenge: Anomaly Detection for NILM Task with Apache Flink" (2020). *(ACM - DOI: https://doi.org/10.1145/3401025.3401758)*.

RESEARCH IN PROGRESS

[1] **Ethan Timoteo Go** "Framework for Synthetic Control in the Firearms Literature". Current ongoing paper as a research assistant for Professor Matthew Miller (Northeastern University) working alongside Professor Louissa Smith (Northeastern University) and Dr. Deb Azrael (Harvard University) (2026). *(Manuscript in preparation)*

EXPERIENCE

Northeastern University **Boston, MA**
Research Assistant *Nov 2025 - Present*
- Conducted independent research with Professor Matthew Miller, Professor Louisa Smith, and Dr. Deb Azrael, evaluating the application of the Synthetic Control Method (SCM) to firearm policy evaluation.
- Identified methodological limitations and untestable assumptions in SCM as applied to firearm policy-setting, and developed evidence-based design guidance for epidemiological applications.
- Synthesizing frameworks from the SCM and difference-in-differences (DID) literature to identify open methodological gaps and propose approaches for evaluating public health interventions.

Biostatistics Research Center at Northeastern University **Boston, MA**
Biostatistician *Oct 2025 - Present*
- Help plan the center's virtual biostatistics seminar series and develop tutorial material on [topic — e.g. data analysis in R, causal dags] for graduate students.
- Analyzed multi-wave longitudinal survey data from the NIA-funded Puerto Rican Elder: Health Conditions (PREHCO) aging cohort and authored a comprehensive data dictionary that documented variable definitions, coding schemes, and dataset structure to support reproducible health outcomes analysis.

Bloomreach **Mountain View, CA**
Software Englineer *July 2022 - May 2025*

- Researched and evaluated LLM architectures for semantic search, benchmarking retrieval approaches before integrating a model into Apache SOLR search algorithms — improving recall accuracy by 30% and boosting top-5 result relevance.
- Designed Bloomreach's attribute extraction logic to enable multilingual catalog support, implementing backend and frontend functionality for French and German data integration.
- Refactored Spark and Kafka applications to process 2 million events per day from Cassandra, increasing pipeline throughput by 35%.

Telenav **Santa Clara, CA**
Data Science Intern *June 2021 - August 2021*

- Modeled high-frequency accelerometer and gyroscope time series (triaxial, sub-second sampling) to classify distinct movement patterns, using Random Forest and logistic regression on raw and derived motion features.
- Developed a composite risk score from multi-modal sensor streams, correcting measurement error and signal noise across heterogeneous sensor sources.
- Built a Python/SQL ETL pipeline to ingest and clean raw telemetry from AWS S3, handling missing data and device-level variation prior to downstream modeling.
- Validated models via cross-validation and ROC analysis, emphasizing false-positive control for a deployment setting with asymmetric error costs.

BUDS Lab @ National University of Singapore (NUS) **Singapore**
Data Science Intern *June 2020 - August 2020*

- Accountable for developing and growing the BUDS Labs Kaggle Data Analytics competition page by creating Kaggle Notebooks that provided user insights and increased engagement.
- Conducted research and analyzed different business problems related to energy and electricity consumption within an environmentally friendly building, identifying measurable patterns and trends.
- Utilized Python to clean, analyze, and model data to compare the advantages of different environmentally friendly architectures, producing measurable comparisons.

CERTIFICATION & AWARDS

- HarvardX's Master in Data Science
- GetSmarter's MIT Implementation of Machine Learning in Business
- Udacity's Data Visualization Nanoprogram
- MLH (Major League Hacking) Boston College's Hack The Heights 3 General Prize Winner

PRE-PRINTS

[1] **Ethan Timoteo Go** "Same Data, Different Winners: Valuation Model Uncertainty Sensitivity Analysis. Project with Professor Eric Gerber (Northeastern University) and Dr. James Walter Frederiksen (prev: Duke University) (2026). *(SSRN - DOI: https://doi.org/10.2139/ssrn.7474498)*

SKILLS & INTERESTS

- Programming: R, Python, SAS, Java, Stata, HTML, CSS, JavaScript
- Languages: English, Indonesian, Japanese, and Chinese
- Big Data and Processing: Apache Kafka, Apache Solr, Apache Airflow, Apache Flink, Apache Spark
- Database Management: Postgres, SQL, Cassandra
- Cloud and Infrastructure: AWS, Docker, Kubernetes, Nginx
- Soft Skills: Teamwork, Presentation, Communication Skills
- Interest: Running, Gym, Volleyball, Reading
